

Bryant Kelly

Corona, CA | brykellwork@gmail.com | [LinkedIn](#) | [GitHub](#) | [bryantk23.github.io/web](#)

Education

B.S. in Computer Engineering	University of Riverside, California	June 2028
A.S. in Computer Science	GPA:3.7 Riverside City College	June 2026
Awards: Dean's List 2022, Recipient of Regent's Scholarship (2026)		

Technical Skills

Programming Languages: C/C++, Java, JavaScript, HTML, CSS, Assembly

Engineering: 3D Printing/Modeling, Fabrication, Blender, UltiMaker Cura, Soldering, Microcontrollers, Circuits

Electrical Equipment: Variable DC Power Supply, Heatsinks, Multimeter, Anemometer

Software Tools: Netbeans, Visual Studio Code, Android Studios, Arduino IDE, Geany, Formspre, Unity, Emulators, Google Workspace, Microsoft 360

Laboratory Experience

Physics Laboratory Experience	Riverside City College	September 2023 - December 2025
• Gained around 2 years of hands-on laboratory experience through Physics, Computer Science, and Computer Architecture • Composed written technical reports, including experimental procedures, data analysis, results and conclusion • Conducted experiments with motion detector photogates, microcontrollers, oscilloscopes, and more		

Projects

Personal Project	November 2023 - December 2023
------------------	-------------------------------

Ionic Thruster | [GitHub](#)

- **3D modeled** and **printed** using **Blender** with **UltiMaker Cura** to fabricate the thruster structure
- Assembled the wiring and transformer for the thruster by **soldering**, using **heatsinks**, and electrical tape
- Operated the thruster with a **Variable DC Power Supply**, and **Anemometer** to measure thrust effectiveness

Personal Website bryantk23.github.io/web	August 2026
---	-------------

- Utilized **JavaScript**, **CSS**, and **HTML** to create my personal website from scratch
- Built the web application using **Visual Studio Code** and **Formspre** for the back-end and front-end

Traffic Light Simulation GitHub	March 2025
--	------------

- Utilized a **Microcontroller** in **Circuits** with LEDs and a button to replicate the US traffic system
- Programmed it in **Assembly** with the **Geany** IDE on a Raspberry Pi

Tic-Tac-Toe GitHub	October 2024
---	--------------

- Programmed a couple version of Tic-Tac-Toe in **C++** in **Netbeans** that lets you play against another player or AI
- The console-base program used 2D arrays to store the data, file input and output to save game results, and implements error-checking/prevention code

GeoTracker GitHub	August 2026 - September 2026
--	------------------------------

- Built an Android app in **Android Studios** in **Java** using an **Emulator** to mimic an Android phone
- Application features intuitive front-end designs with real-time location data storage and usage from the user
